

BALONDOLOZI GLOBAL EQUITY FUND

August 31, 2026

FACT SHEET

INVESTMENT OBJECTIVE

The fund seeks to outperform the MSCI All Country World Index (ACWI) Index by 1% per annum.

INVESTMENT STRATEGY

The objective of a portable alpha strategy is to generate returns more than a specific market index over a market cycle. The portable alpha strategy effectively separates the returns of a preferred index, or beta, and the returns of an alpha-seeking strategy, or alpha. This separation allows the returns of the alpha component to be "ported" on top of whatever market index exposure is desired by a portfolio.

FUND INFORMATION

Fund Classification	Worldwide - Multi Asset - High Equity
Benchmark	MSCI All Country World Index (ACWI)
Risk Profile	Aggressive
Fund Managers	Fannuel Tigere, Karabo Matsepe
Inception Date	01 December 2021
Fund Size	R1462 million
Currency	SA Rands
Administration	Balondolozzi Investment Services (Pty) Ltd
Trustees	ABSA
Regulator	Financial Sector Conduct Authority (FSCA)
Regulation 28	Not Applicable

FEES

Initial & Exit Fees	Nil
Total Investment Charge	15.00%
Portfolio TER	15.00%
Management Fees	0.30%
Transaction Costs	0.00%
Audit Fees	0.00%
Other Costs	0.00%
Vat	15.00%
Pricing	Daily at 17:00

RISK RATIOS

	Fund	Benchmark
Annualised Return	14.15%	11.92%
Sharpe Ratio	0.49	0.34
Sortino Ratio	0.96	0.62
Max Drawdown	-7.77%	-8.45%
Drawdowns	22.00	24.00

FUND COMMENTARY

Global markets were shaped by escalating US fiscal intervention, cautious Fed signalling, and renewed geopolitical risk. Treasury Secretary Bessent's surprise move to double bond buybacks failed to hold down yields, Fed Chair Warsh's Jackson Hole address struck an inflation-wary tone without a clear rate path, and the expiry of the Iran-US ceasefire reignited concerns over Strait of Hormuz shipping. South African assets were comparatively resilient, with the rand firming and local bonds rallying on cooling inflation and strong non-resident inflows.

Equities returned 5.73% (FTSE/JSE Top 40); S&P 500 delivered 2.62% (in rand terms); MSCI EM Equities delivered 3.21% (in rand terms); listed property returned -3.81% (SAPY); nominal bonds delivered 0.69% (ALBI); inflation linked bonds returned 0.99% (CIL) and cash returned 0.57% as indicated by the STeFi Call Index in August 2026.

During the same period; the yield for the R2030 (benchmark bond) rose by +1.5 basis points to end the month at 7.94% whilst the historic price to earnings (P/E) ratio for the FTSE/JSE Top 40 drifted higher by +1.31 points to close at 14.36. Concurrently, the near-term volatilities ticked up by +2.1% (SAVI) to 24.18% whilst medium-term break-evens tightened by -0.18% to 4.24%. Yields for 12-month negotiable certificates of deposits rose by +8.3 bps to close the month at 7.6%. Foreigners bought assets worth +R1.3 billion as markets sold-off during the month of August 2026.

Overall, the fund delivered 1.67% for the month, higher than the benchmark return of -0.01% resulting in an alpha of 1.68%. Fixed income enhancements added 0.05%, while the timing differences between the benchmark and futures contributed 1.65%, with interaction resulting in the remainder. In US dollars, the fund delivered 4.33% compared to 2.56% of the benchmark as the dollar depreciated 2.57% against the rand for the month.

After registering a value of 5% in June 2026, headline inflation for July 2026 was 4.3% (consensus 4.3%). On the same note, the price for Brent crude oil rose by 1.24%, to end the month at \$91.24 per barrel and the Rand appreciated against the Dollar by 2.44% to close at R16.13 per dollar. The seasonally adjusted Kagiso Purchasing Managers' Index (PMI) declined by -0.5 index points to reach 46.8 in July 2026.

The US pointed to a broadening slowdown in economic activity, with several key indicators coming in weaker than expected. While the manufacturing sector initially showed resilience, with the ISM Manufacturing Index rising to 55.6 in July from 53.3, the services sector was broadly stable at 54.1, slightly below expectations. The labour market, however, deteriorated, with nonfarm payrolls falling by 23,000 in July versus expectations for an 80,000 increase, while the ADP employment change of 44,000 also undershot the 65,000 consensus. Despite this, the unemployment rate edged down to 4.1% from 4.2%, suggesting that labour-market weakness has not yet translated into a significant rise in unemployment. Consumer and housing indicators also weakened, with retail sales declining 0.6% m/m and preliminary consumer sentiment dropping to 51.0. Inflation remained relatively contained, with CPI at 3.4% in July, unchanged from expectations and slightly below the prior 3.5%. At the same time, personal income rose 0.43% and spending increased 0.16%, both slightly better than expected, providing some support to the consumer outlook. The US Dollar Index (DXY) started August around 99.9-100.0 early in the month. It then weakened through mid-August, reaching a low around 98.6, before recovering towards month-end. That leaves the dollar roughly 0.3% weaker over August.

PERFORMANCE (Gross of fees)

	Fund	Benchmark
Aug-26	1.67%	-0.01%
Year to Date	12.23%	10.22%
Rolling 12 months	13.77%	10.14%
Return p.a. since inception	14.15%	11.92%
Return since inception	87.54%	70.75%
Highest Rolling 1-year Return	34.92%	35.54%
Lowest Rolling 1-year Return	-12.15%	-12.68%

GROWTH OF R100 INVESTED AT INCEPTION

SECTOR ANALYSIS

The Eurozone showed signs of improving momentum in August, with economic activity proving more resilient than expected despite the recent energy shock. Forward-looking indicators were particularly encouraging, with the August flash Manufacturing PMI rising to 52.8 from 51.9, comfortably above the 51.8 consensus, while the broader composite PMI reached a nine-month high of 52.1, pointing to continued positive growth in Q3. Germany's manufacturing PMI also climbed to 54.1, its highest level in more than four years, suggesting a meaningful improvement in the region's industrial sector. Growth is being supported by increased fiscal spending on infrastructure, energy security and defence, alongside investment in AI and digitalisation and a resilient labour market, with the 2026 growth outlook revised higher to around 0.8%-1.0%. The key constraint remains inflation, however, with headline CPI rising to 2.9% y/y in July from 2.8% previously, while core inflation increased to 2.5%, largely reflecting firmer services prices. Inflation is therefore expected to remain above the ECB's 2% target into early 2027, limiting the scope for monetary easing.

China's economic data in August pointed to a broad-based loss of momentum, despite continued strength in exports and high-tech manufacturing. The official manufacturing PMI improved slightly to 49.8 in August from 49.2. This follows a weaker July, with the RatingDog manufacturing PMI falling to 50.9 from 51.7, also below expectations. Domestic demand remains the main concern, with retail sales growth slowing to just 0.6% y/y in July, while industrial production rose 4.5%, missing expectations of 4.95% and slowing from 5.3%. Inflation also remained subdued, with CPI increasing to 0.5% y/y, below the 0.8% forecast, while PPI fell 3.5% y/y, highlighting continued producer-price deflation and weak pricing power. Overall, China's economy appears to be losing domestic momentum, with weakness evident across consumption, property, investment and private-sector credit demand, although exports and technology-related sectors continue to provide support. Q2 GDP growth slowed to 4.3% y/y from 5.0% in Q1, bringing H1 growth to 4.7%, broadly within the government's 4.5%-5.0% target range.

South Africa has faced renewed pressure from the global oil shock, with the country reportedly paying R56bn more for fuel and ranking among the 20 countries hardest hit by disruptions to the Strait of Hormuz. The recent rise in oil prices has also erased the fuel-price over-recovery, raising the prospect of higher petrol and, particularly, diesel prices. Despite these risks, domestic inflation improved, with headline CPI easing to 4.3% in July from 5.0% in June, supported by lower fuel prices and softer food inflation, while core inflation increased slightly to 4.2%, highlighting persistent underlying pressures. South Africa's external position has provided some support to the currency, with an almost 3% improvement in terms of trade helping the rand gain 2.44% against the dollar in August, outperforming its emerging-market peers. Economic activity remains mixed; manufacturing output contracted 1.7% y/y in June, but performed better than expected, while monthly production rose 0.9%. Meanwhile, retail sales growth slowed to 1.6% y/y, below expectations, signalling weaker consumer demand.

To enhance risk-adjusted returns, the fund continues to employ a portable alpha strategy, decoupling yield generation from market-directional risk. High-quality credit spreads (alpha) will be the primary source of excess return, while equity market exposure (beta) will be passively obtained via index linked contracts. Through this framework, the fund targets pure alpha from credit selection and relative fixed income value, while dynamically managing its beta through futures/total return swaps.
